The data set is a list of states and how they produced different products and resources in different years, the data came from a github of different example data sets found at http://vincentarelbundock.github.io/Rdatasets/datasets.html.

The variables are as followed

-X, a pure incremental counter of which entry the data is

-State, the state which produced these resources

-year, the year in which this was produced.

-pcap- the population cap of state in this year

-hwy- highway production

-water-water production

-util- utility production

-pc-per capita, how much money is made per person

-GSP- generalized system of preferences, results from this system of the government to aid in economic growth

-emp- production of employed citizen

-unemp – production of unemployed citizens
